

GOA-ON is a collaborative international approach to document the status and progress of ocean acidification in open-ocean, coastal, and estuarine environments, to understand the drivers and impacts of ocean acidification on marine ecosystems, and to provide spatially and temporally resolved biogeochemical data necessary to optimize modeling for ocean acidification.

www.goa-on.org

Three high level goals:

- Improve our understanding of OA conditions
- Improve our understanding of ecosystem response to OA
- Acquire and exchange data and knowledge required to optimize forecasts for OA and its impacts

Recent updates:

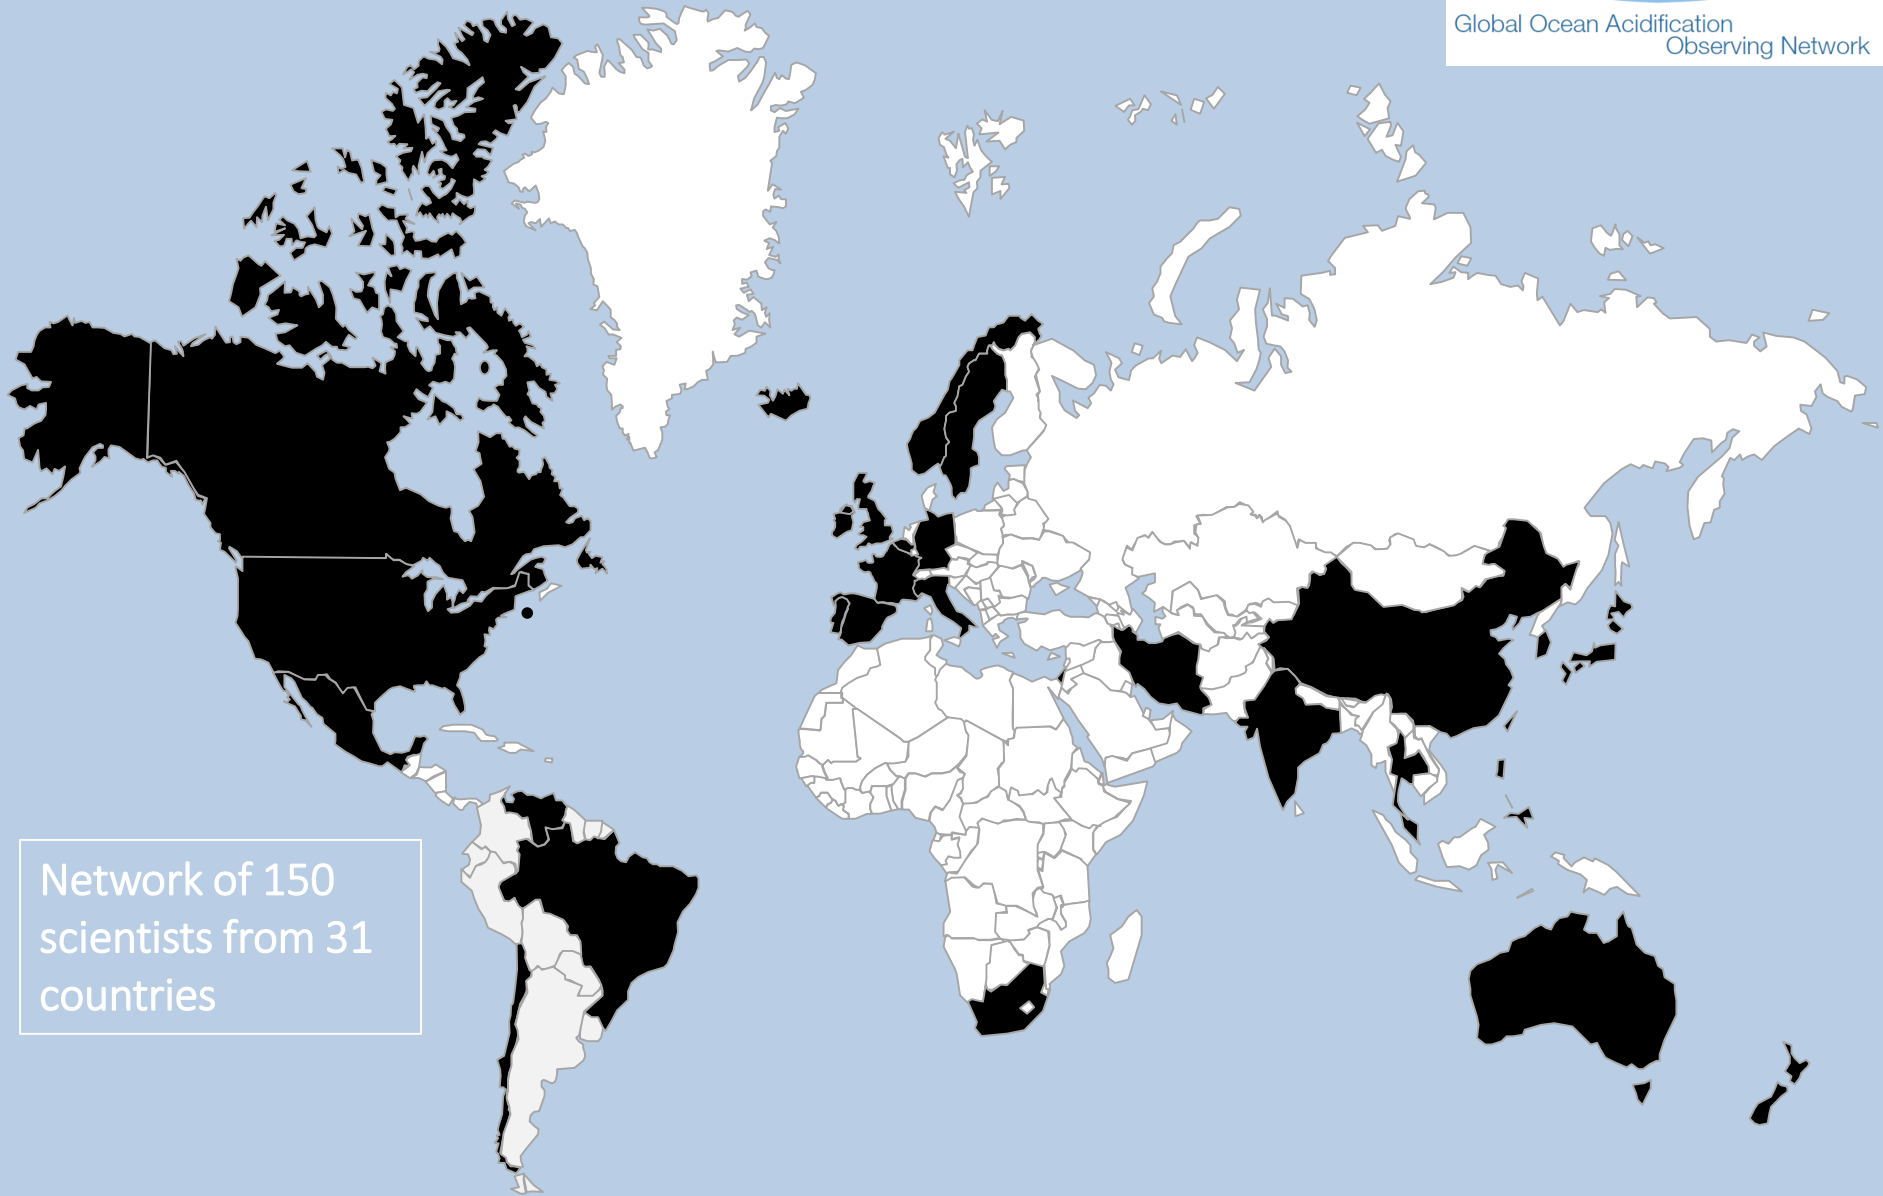

- Establishment of a Distributed Secretariat, with members placed in US NOAA, IOC-UNESCO, and IAEA, and technical staff at University of Washington and NOAA
- Newly established regional hubs: North East Atlantic, North America, Pacific Islands & Territories

Countries included in the Global Ocean Acidification Observing Network (GOA-ON)
